Department of Computer Science and Engineering

CSE207 – Data Structures: LAB 04
Course Instructor: Ms. Tanni Mittra

Recursion

1. Write a program to find GCD of two numbers. You must have to use recursive function to solve this problem.

Sample Input

- a. 18, 24
b. 13, 23

Sample Output

6
1

2. (a). Suppose, you are given a number n. You have to print n, n-1, n-2,.....1 on the console. Write a recursive function to solve the problem.

Sample Input

- a. 6

Sample Output

6 5 4 3 2 1

- (b). Rewrite the previous program to print 1, 2,n-2, n-1, n on the console.

Sample Input

- a. 7

Sample Output

1 2 3 4 5 6 7

3. Write a program to calculate summation up to n-element of a Fibonacci sequence. You have to calculate the n-th element of the series using recursion.

Hint: Fibonacci sequence is 0 1 1 2 3 5 8 13 21 Every n-th element is the sum of previous two(n-1 and n-2)-th element. Suppose, you want to calculate the sum of first 9 terms of the Fibonacci sequence. First you have to calculate each of the term using a recursive function. Then add the newly calculated term one by one.

Sample Input

- a. 8

Sample Output

20

4. Write a program to delete n-th node of a given linked list using recursion.

For example, a linked list

6	2	57	53	18
---	---	----	----	----

After deleting 3rd node, the list will be,

6	2	53	18
---	---	----	----

5. Write a program to sort a linked list using recursion.

For example, a linked list:

61	26	59	31	18
----	----	----	----	----

After sorting the list,

18	26	31	59	61
----	----	----	----	----
